Wade Lai

General Engineer | M.S. Artificial Intelligence Student

I am building practical software development skills through the Johns Hopkins Modern Software Concepts in Python course. This site has my projects and highlights my professional background in engineering, facilities, energy, and public service.

BIO

Wade Lai is a General Engineer with the U.S. Department of Energy, where he supports one of the world's largest environmental cleanup efforts focused on addressing the legacy of nuclear weapons production and government-sponsored nuclear energy research. Prior to joining the Department of Energy, Wade worked for the Naval Sea Systems Command (NAVSEA) at the Washington Navy Yard, supporting Nuclear Aircraft Carriers as an electrical engineer.

Before his time with NAVSEA, Wade served for three years with Washington Headquarters Services at the Pentagon Reservation as an electrical subject matter expert, supporting major building renovation and infrastructure modernization projects. He also spent a decade with the U.S. Coast Guard, where he supported numerous Coast Guard Cutters and conducted electrical plan reviews for a wide range of commercial vessels.

Throughout his career, Wade has developed expertise in engineering, project management, energy management, facilities operations, and process improvement. He is a licensed Professional Engineer, Project Management Professional, Leadership in Energy and Environmental Design Green Associate, Certified Energy Manager, Certified Facility Manager, and Lean Six Sigma Black Belt.

Wade earned a Bachelor of Science in Electrical Engineering from the University of Missouri–St. Louis, a Master of Engineering in Electrical and Computer Engineering from the University of Maryland, and a Master of Business Administration from the University of Maryland. He is currently pursuing a Master of Science in Artificial Intelligence at Johns Hopkins University.

Outside of work, Wade enjoys playing board games, exploring different cuisines, attending fitness classes, and continuing to improve his golf and tennis game.

PROJECTS

Module 1 Flask Portfolio Website

Johns Hopkins Modern Software Concepts in Python

This Module 1 project is a Flask web application that presents a personal homepage, contact information, and project details. It uses templates, static CSS, a shared navigation bar, and a Flask blueprint to organize the site pages.

The project demonstrates basic Python web development, local server execution, route organization, HTML templates, and page styling with CSS.
